

Viaduct Vertical Cable Manager

Description

Vericom's Viaduct Vertical Cable Manager delivers performance in a user-friendly design, providing a solution that is both convenient and highly functional. Columns of plastic fingers with smooth, rounded edges allow cable bundles to enter or exit anywhere along the vertical edge, while the lockable and removable dual-hinged door provides an additional level of protection and security.

Viaduct Vertical Cable Managers offer seamless integration with Vericom 2 and 4 post racks and are available in 6" and 10" widths as well as single and double sided options.

(Note: double sided vertical cable managers are formed by connecting two single sided units back to back.)
