

Modular Plug Crimping Tool

Applications

This modular crimping tool was designed for the professional installer to provide a high-leverage, ultra stable platform for consistent, high quality terminations. This tool is suitable for use with telephone cable, and category cable up to Category 6A.

Description / Specifications

This heavy-duty modular crimping tool is the perfect solution when working with high performance, larger OD cables that are tougher to terminate due to larger gauge conductors, thicker, harder insulation on the conductors, and pair-separating splines.

How To Use:

(Terminating a CAT6A RJ45 Connector)

1. Strip off at least 1" of jacket from end of cable. Use pair separator to isolate pairs.

2. Straighten conductors and trim diagonally.

3. Slide conductors into load bar, then trim conductors at load bar.

4. Slide load bar into connector housing.

5. Insert connector into die crimp.

6. Squeeze tool completely to fully terminate connector IDC's.

Features & Benefits

- Suitable for telephone & network installations up to Category 6A
- Fully seats contacts and terminates conductors for modular connectors
- Provides consistent, high quality terminations
- All steel frame with rust resistant black oxide finish
- Rugged PVC handles
- Packaging: Sold Individually
